DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1. Claims 10 and 11 provide for the use of the process and apparatus in a mobile or stationary fuel cell, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 10 and 11 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd.* v. *Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, drawn to a process for producing hydrogen-containing fuel gas.

Group II, claim(s) 9, drawn to an apparatus for producing hydrogen-containing fuel gases.

- 2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The apparatus recites the special technical feature wherein the water necessary for steam reforming is added separately of together with the hydrocarbon before the second rector stage by means of nozzles or injectors, which is not shared by the process in which the special technical feature is the amount of residual hydrocarbon content at the outlet of the autothermal reforming stage.
- 3. A telephone call was made to John Santalone on April 9, 2009 to request an oral election to the above restriction requirement, but did not result in an election being made. The receptionist informed Examiner that Mr. Santalone was scheduled to be out of the office for a few days and therefore Examiner was not able to obtain an oral election.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Application/Control Number: 10/535,605 Page 4

Art Unit: 1793

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Allowable Subject Matter

- 5. If elected, Claims 1-8 would be allowable.
- 6. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach the specific order of an autothermal reactor that feeds into a steam reactor wherein the autothermal reactor has a residual hydrocarbon content of from 0.1 to 10% by volume and the steam reforming is at a temperature below 650 °C
- 7. Prasad et al. (U.S. Pub. No. 2002/0155061 A1) teaches a method for producing crude syngas where the autothermal reactor feeds into a fired reformer (paragraph 10).
- 8. Pettit et al. teaches an autothermal reactor parallel with a steam reformer (abstract).

- 9. Aasberg-Petersen et al. (U.S. Pat. No. 7,241,401 B2) teaches steam reformer before autothermal reactor in series which is backwards from the series taught by applicant.
- 10. Karafian et al. teaches a Convective Reformer which steams reforms that is fed into an autothermal reformer which is then fed back in to the convective reformer which steam reforms.
- 11. Wang et al. teaches partial oxidation, autothermal reforming, and catalytic partial oxidation used to generate steam for steam reforming.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GUINEVER S. GREGORIO whose telephone number is
